Software Engineering Student | Full Stack and Mobile Developer

Software Engineering student and full stack developer building web, mobile, and data-driven applications. Experienced with React, TypeScript, Node.js, Java and Spring Boot, SQL databases, Docker, Flutter, and QGIS-based mapping and spatial analysis. Seeking an internship or junior developer role contributing to production-focused software while continuing to grow as an engineer.

PROJECTS

Ahnyar House

- Built a QR ordering workflow covering menu selection, order handling, inventory, and receipt management.
- Developed the React and TypeScript front end and an Express REST API backed by Prisma and PostgreSQL.
- Prepared application validation, environment configuration, and the DigitalOcean deployment architecture.

LearnHub E-Learning Management System

- Collaborated on an e-learning platform for courses, assessments, progress tracking, and certificates.
- Contributed to the Spring Boot backend, MySQL database design, and React front-end integration.
- Designed role-based workflows and Dockerized the development environment.

SKILLS

- **Languages:** Dart, Java, JavaScript, Python, SQL, TypeScript
- **Web and backend:** Express, Next.js, Node.js, React, REST APIs, Spring Boot, Tailwind CSS
- **Mobile:** Firebase, Flutter, React Native
- **Databases:** MongoDB, MySQL, PostgreSQL, Prisma
- **Geospatial:** geospatial visualization, map design, QGIS, spatial data analysis
- **Cloud and tools:** DigitalOcean, Docker, GCP, Git, GitHub, Hostinger
- **AI:** API integration, retrieval augmented generation
